» are you a *nix user? btw what does the kernel panic in 14.04 do? should I be concerned? helge_: they changed the kernel to to include intel xorg driver. so it hangs some systems where that driver is missing helge_: There is no way to tell. It might simply do nothing or it might turn your PC into a brick. Your best bet is to do a full backup with rsync or similar and then do a fresh install from an official iso image and only then test if you can get a clean install of your system. helge_: But I am not an expert in this area. Please check the documentation. elias_a: is there a safe way to upgrade to 14.10 using do-release-upgrade -c? ie without having to do fresh install? helge_: I haven't done that before. Sorry. helge_: yes, you can use do-release-upgrade and it will show you what you need to do thanks k11_helge_: Sorry, I was wrong about the rsync tool. elias_a: :) rsync works with remote ssh? helge_: Yes. rsync -azv --progress --delete /home /mnt/usb/ helge_: The -azv means: (append) archive (v)ecryption

(z)oip (v)esentation (v)erify (a)bility helge_: The --progress means that rsync will show the progress of the operation. helge_: rsync -azv --progress --delete /home /mnt/usb/ helge_: That will do a backup of all the data in your /home directory to your USB drive. elias_a: ok it will take a while? helge_: Usually not that much longer than a regular 82157476af
